

Automobile Service & Maintenance Policy

This document defines standard policies for vehicle servicing, maintenance, inspection, warranty handling, and customer service. It is intended as a knowledge-base document for the automobile RAG system.

1. Vehicle Service Eligibility

Vehicles are eligible for routine service based on the manufacturer's recommended maintenance schedule or the service interval specified by the service center. Customers should provide the vehicle registration number or vehicle identification number (VIN) when creating a service request.

2. Routine Maintenance

Routine maintenance may include engine oil replacement, oil-filter replacement, air-filter inspection, brake inspection, tyre inspection, battery checks, fluid-level checks, and general vehicle inspection. The exact work depends on vehicle condition and the applicable maintenance schedule.

3. Vehicle Inspection

A vehicle should be inspected before major repair work is started. The inspection may identify mechanical, electrical, safety, or cosmetic issues. Additional repairs identified during inspection require customer approval before the work is performed.

4. Repair Approval

Service advisors must communicate the estimated repair cost and scope of work to the customer. Repairs outside the originally requested service should not be started without customer authorization, except where immediate action is required to prevent a significant safety risk and the applicable business process permits such action.

5. Warranty Claims

Warranty claims are subject to the applicable vehicle manufacturer's warranty terms. The service center may inspect the vehicle and supporting records before accepting a warranty claim. Items excluded by the warranty terms are handled as customer-pay repairs.

6. Service Completion

After service completion, the vehicle should undergo a final quality check. The service record should contain the work performed, replaced parts where applicable, inspection findings, and any recommended follow-up maintenance.

7. Customer Pickup

Customers should collect the vehicle after receiving confirmation that the service is complete. Any pending payment or documentation requirements should be completed before vehicle handover according to the service center's process.

8. Roadside Assistance

Roadside assistance may be available for eligible vehicles and service plans. Common assistance categories include breakdown support, battery assistance, tyre-related help, and towing coordination. Availability depends on the applicable service plan and location.

9. Important Customer Information

Item	Policy
Service booking	Vehicle details and customer information are required.
Additional repairs	Customer approval is required before non-routine repairs.
Warranty	Claims are evaluated according to applicable warranty terms.
Final inspection	A quality check should be completed before handover.
Service record	Work performed and relevant findings should be recorded.

Document purpose: RAG knowledge source for an automobile-domain AI assistant. The content is structured into clear sections so that retrieval can return relevant policy information for user questions.
